

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

justly, though it is odd that the type should have been taken at San Blas, Mexico, "August 9," this being on Aleutian Island and Kamchatkan species. *Phaleris* Temminck, 1820, is restored for the Paroquet Auklet in place of *Cyclorrhynchus* Kaup, 1829, although Stejneger (Orn. Expl. in Commander Isls., 1855, p. 38) has pretty clearly shown that *Alca pygmaea* Gm. must be regarded as the type of *Phaleris*. But these are mainly points where differences of opinion are liable to occur—we fear for a long time to come.—J. A. A.

**Evans's 'Birds'.**<sup>1</sup>—In a well illustrated volume of some 600 pages Mr. Evans has attempted to give "a short description of the majority of the forms in many of the Families, and of the most typical or important of the innumerable species included in the large Passerine Order." This is preceded by an introductory chapter of some 20 pages on the structural peculiarities of birds, their classification, geographical distribution, migration, etc. Mr. Evans follows Dr. Gadow's scheme of classification, "with some slight modifications." He begins with the Archæornithes and ends with the Passere, the final family of the series being the Fringillidæ. The work being intended as a popular treatise on the Class Aves, the more strictly technical phases of the subject have been avoided, as also the discussion of disputed questions. The work is prepared in a conservative spirit, without attempt at fine writing, and without stating as fact the many theories and conjectures that have received almost unqualified endorsement in some of the recent 'popular' books on birds, bird migration, and kindred subjects. A general account is given of each family, with an enumeration of many of its principal forms, and brief reference to their distribution and characteristic traits. The text is fully illustrated with, for the most part, excellent wood cuts. A large part are admirable figures by Mr. G. E. Lodge, prepared especially for the present work, while others are by Smit, or from other sources, and are thus not unfamiliar through previous use in other connections. The volume as a whole is entitled to high commendation, and will prove of great convenience as a general account of the principal forms of bird life, both recent and extinct.—J. A. A.
